

Knowledge Transfer Partnership

MEARU

Cartwright Pickard Architects

MEARU have been engaged in a Knowledge Transfer Partnership with award-winning, research-led architects Cartwright Pickard. The partnership focuses on building performance evaluation and draws on specialist knowledge developed within MEARU.

Developing an understanding of the energy and environmental performance of buildings will lead to improved, more cost-effective housing design for the future. The Knowledge Transfer Partnership seeks to develop and embed Cartwright Pickard's capability to undertake detailed performance evaluation in sustainable, low-energy housing and to utilise these findings in their future architectural practice.

Based within Cartwright Pickard's London Office, MEARU's KTP associate has been comparing the predicated and 'as-built' performance of a variety of public sector housing in the South of England.

Knowledge Transfer Partnerships helps UK businesses to access the knowledge and expertise available within UK Universities and Colleges in order to improve their competitiveness, productivity and performance.
